A chelated iron formulation for foliar & soil application

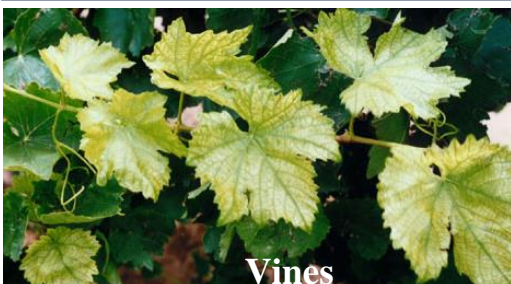

LIG-IRON 6.25%

- ▶ Organic chelate provides superior foliar absorption when compared with synthetic & non-chelated formulations
- ▶ Prevention & quick correction of iron deficiencies
- ▶ Compatible with other nutrient & chemical sprays
- ▶ Binding properties enhance absorption on waxy leaves & prevents sprinkler/rain wash-off
- ▶ Effective via fertigation on high pH & limestone soils
- ▶ High level of crop safety
- ▶ Optimizes photosynthesis & crop development

With iron nutrition, prevention of a deficiency is always better & easier than correction. If you have a history of iron deficiency, early preventative sprays are recommended as deficiencies are more difficult to correct once iron chlorosis symptoms appear.

APPLICATION

Major iron deficiencies: 5 L/ha
Maintenance: 1-2.5 L/ha
Fertigation: 5 L/ha
