# LIG-ZINC + Mn

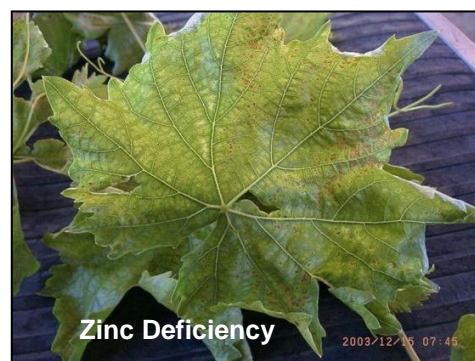

Made for Grapevines

← SHOOTS 10 cm

→ **IMPORTANT!**

Even fruit set and 'hen and chicken' determined at this early stage in vine.

Apply LIG-ZINC + Mn @ 2 L/ha at 10cm shoots & repeat at 30cm shoots.  
On high pH or calcareous soils apply an additional 2 L/ha prior to flowering.

- ▶ Conventional zinc sprays go on 2 weeks prior to flowering – TOO LATE
- ▶ Conventional zinc sprays require a large canopy for foliar absorption
- ▶ Apply LIG-ZINC + Mn at 10 cm shoot stage because it will bind to young leaves and is quickly absorbed even with a limited canopy area
- ▶ Cost effective LIG-ZINC + Mn corrects a major zinc deficiency @ 4 L/ha
- ▶ In table grapes early application of LIG-ZINC + Mn does not interfere with GA sprays
- ▶ High plant availability of chelated LIG-ZINC + Mn through leaf works fast
- ▶ Compatible with other nutrients & agri-chemicals
