High analysis zinc chelate for soil & foliar application

Zinc PLEX 11%

- ▶ High analysis zinc chelate
- ▶ Contains a high concentration of active chelating agent
- ▶ Good availability when used through fertigation on high pH soils
- ▶ Excellent binding properties (effective through centre pivots)
- ▶ Improves fruit/tuber set & pack-outs
- ▶ 2-3 times more efficient than sulphates
- ▶ Can be used for foliar application also

Zinc PLEX utilizes an organic chelate which is ideal for soil application as it reduces precipitation (lock-up) of zinc that is common on all soil types. The chelate also acts like a humate in the soil, helping release other locked up nutrients. Zinc PLEX is also effective as a foliar spray & ideal through centre pivots due to its excellent binding properties that reduce wash-off & leaching. Zinc PLEX is superior to other chelated zinc products because it has a higher percentage of active chelating material. This not only improves zinc utilization, but also stimulates microbial activity & nutrient release.

APPLICATION RATE – 2-3 L/ha (dripper), 4 L/ha (centre pivot)
