

# SPECIALTY LIQUID NUTRIENT PRODUCTS

## ZINC PLEX

**Zinc 11%**

- ▶ **High analysis zinc chelate**
- ▶ **Contains a high concentration of active chelating agent**
- ▶ **Good availability when used through fertigation on high pH soils**
- ▶ **Excellent starter zinc at planting (eg. cotton)**
- ▶ **Improves fruit/tuber set & pack-outs**
- ▶ **2-3 times more efficient than sulphates**
- ▶ **Can be used for foliar application also**

Zinc PLEX utilizes an organic chelate which is ideal for soil application as it reduces precipitation (lock-up) of zinc that is common on all soil types. The chelate also acts like a humate in the soil, helping release other locked up nutrients. Zinc PLEX is also effective as a foliar spray & ideal through centre pivots due to its excellent binding properties that reduce wash-off & leaching. Zinc PLEX is superior to other chelated zinc products because it has a higher percentage of active chelating material. This not only improves zinc utilization, but also stimulates microbial activity & nutrient release.

Available From

**Nutrien**  
Ag Solutions®

### APPLICATION

Dripper: 2-4 L/ha every 14-28 days. Planter: 2 L/ha. Foliar: 2-3 L/ha
